Diagnose ECONNRESET Err...

Please go through my langflow_read file and fix the error

Let me first look at the LangFlow_ReadFile request to understand what's in it.

Retrieved details for request LangFlow_ReadFile from tab

I can see the issue clearly. The request is getting a 403 - Invalid sz: missing API key error. Looking at the request:

- The x-api-key header currently has the value 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 — this looks like a Groq API key (starts with gsk_), not a valid Langflow API key.
- The description mentions the placeholder YOUR_API_KEY_HERE, so the correct key was never set.

To fix this, I need your Langflow API key. You can find it in your Langflow instance under Settings → API Keys. Could you share it so I can update the x-api-key header?

Alternatively, if you'd like to store it as a variable (recommended), I can set it up as [[Langflow_api_key]] in your environment — just share the key value and let me know which approach you prefer.

Describe what you need. Press @ for context, / for Skills.
