

User Story Generator in Lang Flow

Starter Project /  User Story Review Agent -May Gen AI

Create the collection in postman using Share> API Keys

</> API access

API access requires an API key. You can [create an API key](#) in settings.

Python JavaScript cURL

macOS/Linux Windows

```
1 curl --request POST \
2   --url 'http://localhost:7860/api/v1/run/a54b71dc-3057-4ae0-9002-05caaa6a664b?stream=false' \
3   --header 'Content-Type: application/json' \
4   --header "x-api-key: YOUR_API_KEY_HERE" \
5   --data '{
6     "output_type": "text",
7     "input_type": "text",
8     "input_value": "hello world!",
9     "session_id": "YOUR_SESSION_ID_HERE"
10  }'
```

Postman Screen

- Deleted the session id
- Uncheck the stream in params

Modified the prompt a bit

Edit Prompt

Example Output:

Parameter Description Score (out of 20)
Clarity The story is straightforward but lacks detailed acceptance criteria. 16
Completeness Preconditions not clearly mentioned. 14
Business Value Alignment Strong healthcare relevance and compliance focus. 19
Testability Can be tested through prescription workflow automation. 17
Technical Feasibility Technically feasible with EHR integration. 18

Overall Score: 84 / 100

Improvement Areas:

Add explicit acceptance criteria for prescription error handling.
Specify validation rules for dosage and duplicate drugs.
Include system actor details for approval workflow.

Persona

You are acting as a senior business analyst with 10+ years of experience in healthcare IT systems, specializing in EHR (Electronic Health Records), clinical workflow automation, and regulatory compliance (HIPAA, HL7, PoPIA).
You are skilled in reviewing agile user stories for clarity, structure, and completeness.

T - Tone

Professional, analytical, and constructive — similar to a BA review summary for a healthcare project stakeholder meeting.
Avoid generic feedback; emphasize actionable, healthcare-specific improvements.

Also, provide few industrial examples for the above scenario

{} Prompt Variables: userStory

Prompt variables can be created with any chosen name inside curly brackets, e.g. {variable_name}

Visualize

not clearly mentioned, and acceptance criteria are missing. | 8 | Business Value Alignment | The story lacks clear healthcare relevance and compliance focus. | 5 | Testability | It is difficult to derive test cases without clear acceptance criteria. | 4 | Technical Feasibility | The story lacks technical feasibility details, making it hard to assess. | 7 | Overall Quality Score (out of 100): 30 / 100

Improvement Areas:

- 1. **Add explicit acceptance criteria:** Include clear and concise acceptance criteria to ensure the story is testable and meets the required functionality.
- 2. **Specify preconditions:** Clearly mention preconditions to ensure the story is well-defined and testable.
- 3. **Enhance business value alignment:** Clearly articulate the healthcare relevance and compliance focus of the story to ensure it aligns with digital health standards.
- 4. **Improve testability:** Derive clear test cases from the acceptance criteria to ensure the story is testable.
- 5. **Assess technical feasibility:** Provide technical feasibility details to ensure the story is practically implementable within typical healthcare system constraints.

Industrial Examples:

- 1. **EHR Integration:** When implementing an EHR system, a user story might be: "As a doctor, I want to access patient medical history digitally, ensuring safety and compliance."
- 2. **Clinical Workflow Automation:** A user story for clinical workflow automation might be: "As a nurse, I want to automate patient medication administration, ensuring accuracy and compliance."
- 3. **Regulatory Compliance:** A user story for regulatory compliance might be: "As a hospital administrator, I want to ensure HIPAA compliance for patient data storage, ensuring patient safety."
